

BREQ LABS

Firmware Programmer

BreqLabs

About Us

Our mission is to make VR experience immersive and highly engaging by bringing your hands into the virtual world. Our VR controllers are highly accurate, have low latency and low power consumption. Our VR controller gloves can make you feel what you see and can also track you as you walk in the VR world, unlocking new possibilities for exploration!

Responsibilities

- Update and extend device firmware in C
- Maximize the use of hardware accelerators on board
- Improve code efficiency and build new features

Qualifications

- Embedded software programming experience
- Capable of reading a schematic and using an oscilloscope
- Capable of rapidly adapting to new development environments
- Capable of understanding mathematical equations and geometry

Job Type: Full-Time

Application

Applicants must send a cover letter and resume to info@breqlabsinc.com. The position will start as soon as a suitable candidate is found.
