

Data and Outreach

Enginehire

About the Company:

Enginehire (enginehire.org) is a data driven platform built to connect engineering companies with young engineering talent. Thousands of students and young engineers have created enginehire profiles outlining who they are, what they are interested in, and what they are good at.

We work with companies that are interested in recruiting young engineers and understand their requirements. Once we know who they are looking for, we use a series of algorithms to find the candidates that are the best fit for the position and the organization.

Job Description:

Everything we do can basically be summed up with two words: data and outreach, and that's what we are looking for. Data skills are important for managing our database of profiles and making the best connections. Outreach is equally critical, since we are always talking to new companies, students, and potential partners. We know the two skills aren't really related, but in a startup environment, the reality is that everyone needs to do everything.

Qualification:

- Interest and knowledge of data and algorithms
- Strong communication skills (meeting people in a way that they like and trust you, making phone calls in a way that effectively expresses ideas, writing professional emails)
- Experience with WordPress websites is a plus
- Knowledge of Python and Microsoft Excel is helpful

Data and Outreach
